

CelSian job description: Software engineer

Description of the role:

As software engineer at CelSian you are responsible for managing our various software packages. We have different packages that need maintained and updated to suit the needs of our customers and to be ready for the next wave in Artificial Intelligence. We expect you to plan and execute this work in close cooperation with our CFD modelling group.

Key tasks:

- Develop and update an agenda for our software packages
- Keep our software running
- Initiate and coordinate new software updates, based on customer feed back
- Determine operational feasibility by evaluating analysis, problem definition, requirements, solution development, and proposed solutions.
- Document and demonstrate solutions by developing documentation, flowcharts, lay outs, diagrams, charts, code comments and clear code.
- Prepare and install solutions by determining and designing system specifications, standards and programming
- Recommend changes in policies and procedures to improve simulation operations

Requirements:

- Passion for technology
- Solid background in IT (minimum 5 years work experience)
- Experience with Fortran / C++ / Paraview
- Fluent in English
- Team player
- Can-do mentality (you thrive when putting ideas to work)

CelSian offers:

- An equal opportunity place to work, and with our global customer base we're proud to celebrate differences between our team members and affiliated partners
- Intellectual inspiring work environment, ambitious team
- Excellent benefits including 32 holidays and top-notch pension arrangement
- All-you-can-eat-lunch
